EVR Vertical multistage pumps

Compact and solid structure

- Silicon carbide shaft bearing and guide bushing
- WRAS approved PPS (EVR 1-3-6-10-15-20) / PTFE (EVR 30-45-65-95)
- Easily replaceable mechanical seal, no need to disassemble the pump (For models higher than 4 kW, the motor does not need to be removed)
- Reduced service and maintenance time
- Impeller with replaceable Stainless steel wear ring in neck (for EVR 30-45-65-95)
- Discharge and suction port: Oval, round, Victaulic flanges

High quality materials

- Stainless steel impeller and diffuser for corrosion resistance
- Standard mechanical seal (EN 12756 ex DIN 24960) WRAS approved
- Balanced version meachanical seal as standard for EVR 30-45-65-95
- Standard IE2/IE3 motor, size B14 up to 4 kW / size B5 from 5.5 kW
- Intermediate Silicon carbide bearing for stabilisation of pump shaft for models with a high number of stages
- Hydraulic characteristics are guaranteed, according to ISO Standard 9906:2012, grade 3B

Technical data

- Flow: up to 115 m³/h
- Head: up to 326 m
- Motor power: from 0.37 to 45 kW
- Maximum working pressure: PN32
- Liquid temperature: -15 °C / +120 °C

OPTIONS

- Special materials for the mechanical seal, gaskets and elastomers
- Balanced mechanical seal EN 12756 for EVR 1-3-6-10-15-20
- Special versions: Oversized motor, High pressure, Overlapping flanges, pumps equipped with Drives

✓ Robust and reliable

✓ Drinking water approvals

DM 174-2006

✓ All wetted parts are made of Stainless steel

Standard IE2/IE3 motor

Cartridge mechanical seal

is replaceable without dismounting the pump (for models > 4 kW no motordismantling necessary)

Intermediate Silicon carbide bearing

to stabilize the hydraulics with a large number of stages

Easy installation in-line ports

Water Distribution,
Pressure boosting,
Drinking water

Irrigation,
Water treatment plants,
Gardening, Sprinklers

Wash down unit, Boiler feed

Domestic, industrial and
agricultural systems

Circulation of hot and cold
water for heating, cooling,
conditioning systems

EVR Vertical multistage pumps

PRODUCT DESCRIPTION

00130239 02/2021

CARTRIDGE MECHANICAL SEAL

Unbalanced

Balanced

Vertical multistage pumps are rotodynamic pumps that are not self-priming. They are assembled with one or more stages and have a radial or semiaxial (mixed) flow. The pump consists of a pump body with in-line connections to the pipes, an external waterproof shell and an upper bracket to support the motor. The base of the pump allows it to be fixed to the ground. The tie bolts guarantee the structural integrity. The motor shaft and the pump shaft (driven shaft) are connected by a rigid, removable coupling. This rigid coupling can be equipped with a ball bearing to support axial thrust (thrust assembly). The cartridge-type mechanical seal is periodic maintenance-free.

Motors

The pump must be coupled with a single-phase (up to 2.2 Kw, IE2) or three-phase (up to 45 kW) synchronous or asynchronous electric motor. Dimensions are according to the IEC 60034-1 or NEMA standard, depending on the motor type.

The motors are totally enclosed fan cooled (TEFC), air cooled and asynchronous for non-explosive risk environments.

The features of original equipment motors with a power output of up to 4 kW are shown in the table below. If a different motor is used, it must have equivalent features. The drive-end side bearing must be blocked, and the non-drive-end side bearing must be spring-loaded. Otherwise, you can order the thrust bearing kit as an optional extra (see the example in the figure).

A PTC 155°C sensor is available on request for power ratings from 0.75 kW to 7.5 kW.

The PTC is standard for power ratings from 11 kW.

00130243 02/2021

For IEC 60034-1 standard, available:

MEC 71 / MEC 80 / MEC 90 / MEC 100-112

HEAVY DUTY MOTOR SIZING

All values indicated on the motor label and in the table refer to clean water at the maximum working temperature listed on the nameplate.

For high-density and viscous liquids, please contact the manufacturer. If the ambient temperature and/or altitude exceed the values on the nameplate, reduce the motor service factor below the nominal power.

The graph shows how to choose the right maximum service factor applicable. This is the share of the nominal power.

Motors

TERMINAL BOX POSITION*

The position of the motor can be rotated to change the position of the terminal box.

* Consult the operation manual for instructions

THREE-PHASE MOTORS

- High efficiency three-phase motors 0.37-0.55kW (IE2), 0.75-45kW (IE3), according to EU Regulation 2019/1781
- The standard design includes the following basic features, which provide a high level of flexibility:
- Multi Mount Construction allows for an easy change of terminal box position
- The terminal box can rotate 90° to allow for cable entry from any direction
- Voltage: 230/400V up to 3 kW , 400/690V from 4 kW and above
- Special voltages and versions are available upon request

Motors

NEW INTERNATIONAL EFFICIENCY CLASSES OF MOTORS – IE CODE

IEC 60034-30:2008 defines the efficiency classes of motors worldwide.

IE1 = Standard Efficiency (comparable to EFF2)

IE2 = High Efficiency (comparable to EFF1)

IE3 = Premium Efficiency

The efficiency levels according to IEC 60034-30 are measured based on the test methods defined in IEC 60034-2-1:2007.

The IEC 60034-30 only defines requirements of efficiency classes and aims to create provisions for international consistency.

It does not define which motors must be supplied with which efficiency level. This is subject to respective regional legislation.

Output	IE2 code Standard Efficiency			IE3 code Standard Efficiency		
	2 poles	4 poles	6 poles	2 poles	4 poles	6 poles
0,37	69,5	72,7	67,6	73,8	77,3	73,5
0,55	74,1	77,1	73,1	77,8	80,8	77,2
0,75	-	-	-	80,7	82,5	78,9
1,1	-	-	-	82,7	84,1	81
1,5	-	-	-	84,2	85,3	82,5
2,2	-	-	-	85,9	86,7	84,3
3	-	-	-	87,1	87,7	85,6
4	-	-	-	88,1	88,6	86,8
5,5	-	-	-	89,2	89,6	88
7,5	-	-	-	90,1	90,4	89,1
11	-	-	-	91,2	91,4	90,3
15	-	-	-	91,9	92,1	91,2

30	-	-	-	93,3	93,6	92,9
37	-	-	-	93,7	93,9	93,3
45	-	-	-	94	94,2	93,7

Efficiency values according to IEC 60034-30:2008.

Efficiency standard calculation: IEC 60034-2-1:2007

Noise

The noise level of an electrical machine is determined by measuring the sound pressure level in accordance with curve A of the sound level meter to EN 60651 and is indicated in dB (A). The permitted noise levels of electrical machines are fixed in EN 60034 - 9 (IEC 34-9). The noise level of the motors is below these limit values. Structure-borne sound measurements are carried out in an anechoic testing chamber to EN 21680-ISO 1680. The speed is corresponding to a main frequency of 50 Hz and the number of poles.

Noise levels

The noise values listed below refer to 50 Hz at rated voltage with a tolerance of up to +3 dB (A). Values for pole-changing motors are available on request. For 60 Hz supply, the values are 3-5 dB (A) higher. Sound pressure level (LpA) and sound power level (LWA) refers to three-phase motors with single-speed, dimensions and output ratings as per IEC 60072.

Frame size	2 poles		4 poles	
	LWA	LpA	LWA	LpA
56	57	48	47	38

This table should be considered a general guide. It is important to consider the specific working conditions, particularly the concentration, specific weight, and/or viscosity of the pumped liquid, as well as the liquid temperature and pressure. All of these factors affect motor and pump performance. When pumping dangerous liquids, it is recommended that you take safety precautions. For further details, please contact Franklin Electric.

Performance curves and technical data

ErP Regulation

Information related to energy performance of the pump, according to Reg. 547/2012 CE:

Minimum efficiency index: $MEI \geq 0.7$;

The benchmark for most efficient water pumps is $MEI \geq 0.70$;

Year of manufacture: see nameplate or the label in the Instruction manual;

Manufacturer's name or trade mark, commercial registration number and place of manufacture: see nameplate or the label in the Instruction manual;

- 1) Product's type and size identificatory: see nameplate or the label in the Instruction manual;
- 2) Hydraulic pump efficiency with trimmed impeller: see nameplate or the label in the Instruction manual;
- 3) Pump performance curves for the pump, including efficiency characteristics: see technical datasheet (<http://franklinwater.eu/products/>);
- 4) The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter;
- 5) The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable speed drive that matches the pump duty to the system;
- 6) Information relevant for disassembly, recycling or disposal at end-of-life: see the Instruction manual;
- 7) ---;
- 8) ---;
- 9) ---;
- 10) Information on benchmark efficiency is available at <http://europump.net/uploads/Fingerprints.pdf>;
- 11) Benchmark efficiency graph for $MEI = 0.7$ and for $MEI = 0.4$ available at: <http://europump.net/uploads/Fingerprints.pdf>;

Information related to energy performance of the motor, according to Reg. 2019/1781 CE and modifications:

- 1) Nominal efficiency (η) at the full, 75 % and 50 % rated load and voltage (UN): see motor nameplate or the Catalogue (<http://franklinwater.eu/products/>);
- 2) Efficiency level: see motor nameplate or the catalogue;
- 3) The year of manufacture: see motor nameplate;
- 4) Manufacturer's name or trade mark, commercial registration number and place of manufacturer: see the motor nameplate;
- 5) product's model number: see motor nameplate or the catalogue (<http://franklinwater.eu/products/>);
- 6) Number of poles of the motor: see motor nameplate or the catalogue (<http://franklinwater.eu/products/>);
- 7) The rated power output(s) or range of rated power output (kW): see motor nameplate or the catalogue (<http://franklinwater.eu/products/>);
- 8) The rated input frequency(s) of the motor (Hz): see motor nameplate or the catalogue (<http://franklinwater.eu/products/>);
- 9) The rated voltage(s) or range of rated voltage (V): see motor nameplate or the catalogue (<http://franklinwater.eu/products/>);
- 10) The rated speed(s) or range of rated speed (rpm): see motor nameplate or the catalogue (<http://franklinwater.eu/products/>);
- 11) Information relevant for disassembly, recycling or disposal at end-of-life: see the motor Instruction manual;
- 12) information on the range of operating conditions for which the motor is specifically designed (<http://franklinwater.eu/products/>):
 - a. altitudes above sea-level: 0-1000 m;
 - b. ambient air temperatures, including for motors with air cooling: max. 40°C;
 - c. ---;
 - d. maximum operating temperature: max. 60°C;
 - e. ---.

Performance selection

This section explains how to choose the pump model that best meets your needs.

The following information are required:

- Required flow
- Input and output pressure
- Fluid features: density, viscosity, temperature, chemical aggressiveness, and presence of abrasive particles.
- The connection type

Verify that the selected pump piping type can withstand the required maximum working pressure (pump nominal pressure $P_N \geq$ application nominal pressure).

The difference between the required outlet pressure and the input pressure determines the head that the pump must supply to the fluid. The duty point is determined by crossing the flow and head values.

To ensure you get the best multistage pump, follow these steps:
Select the pump family according to the requested flow rate, choosing the one closest to the best efficiency point.

- 1) Choose the number of stages that is closest to the requested head.
- 2) Draw a vertical line from the duty point to determine the absorbed power, pump efficiency, and required NPSH.

If the viscosity of the fluid differs significantly from that of clean water at ambient temperature, it is necessary to adjust the selection parameters (contact the manufacturer). Additionally, if the density or viscosity is higher than that of water, a higher power sizing will be necessary (contact the manufacturer).

NPSH check:

Compare the available pump input NPSH value with the required pump value to avoid performance losses and pump wear.

The maximum height of the pump above the liquid level (H) can be calculated using this formula

$$H = p_b \times 10.2 - NPSH - H_f - H_v - H_s$$

Where:

p_b : Absolute barometric pressure or absolute pressure of the liquid on suction side [bar].

NPSH: Suction head at maximum duty flow rate [m]

H_f : Pressure drop in the suction pipe at maximum flow rate [m]

H_v : Vapour pressure [m] depending on the temperature of the liquid [m]

H_s : Safety margin [m] (minimum 0.5)

If the calculated value is less than 0, the pump must be positioned below the liquid level by the value of H.

Construction materials selection:

Select the mechanical seal and elastomers based on their compatibility with the pumped fluid and the presence of abrasive particles.

Similarly, pump materials (metal alloys) must be chosen according to the aggressiveness of the liquid. Liquid aggressivity usually increases with acidity or basicity, concentration of dissolved chlorides and salts, and working temperature.

Refer to the "Compatibility of Fluids and Materials" table on page 18 for the correct selection.

DIMENSIONAL DRAWINGS

F Version

Round flanges on body type PN25/40: the pump is supplied without counterflanges (Optional accessories, including bolts and joints)

T Version

available from 1EVR02 to 1EVR23

Oval flanges on body type PN16: the pump is supplied without threaded oval counter flanges (Optional accessories, including bolts and joints)

V Version

Connections with rapid fittings type "Victaulic": the pump is supplied without the collars (Optional accessories)

00130099 09/2023

EVR 1 - Performance curves at 50 Hz

MEI ≥ 0,70

The hydraulic characteristics are guaranteed, according to ISO standard 9906:2012, grade 3B

002014A.02/2021

EVR 1 - Performance curves at 50 Hz

MEI ≥ 0,70

The hydraulic characteristics are guaranteed, according to ISO standard 9906:2012, grade 3B

002014A 02/2021

* The efficiency value is referred to or more stages only for full diameter impeller

Performance curves of Q, H and P depend on the rpm number according to the following formula:

$$Q_2 = Q_1 \cdot \left(\frac{n_2}{n_1} \right), \quad H_2 = H_1 \cdot \left(\frac{n_2}{n_1} \right)^2, \quad P_2 = P_1 \cdot \left(\frac{n_2}{n_1} \right)^3, \quad \eta \text{ remains approximately the same.}$$

The rpm number related to the performance curves (Q-H-P) is indicated in the power chart.

Performance curves (Q-H-P) will change according to the formulas above.

Q=Flow, H=Head, P=Power, η =Efficiency

DIMENSIONAL DRAWINGS

F Version

Round flanges on body type PN25/40: the pump is supplied without counterflanges (Optional accessories, including bolts and joints)

T Version

available from 3EVR02 to 3EVR21

Oval flanges on body type PN16: the pump is supplied without threaded oval counter flanges (Optional accessories, including bolts and joints)

V Version

Connections with rapid fittings type "VICTAULIC": the pump is supplied without the collars (Optional accessories)

EVR 3 - Performance curves at 50 Hz

High pressure kit

This is an assembly kit for a high-pressure set with two pumps. This kit facilitates a hydraulic connection between the pumps. For more information, please contact Franklin Electric.

Variable Frequency Drives (VFD)

For details on variable frequency drives, please refer to the dedicated product catalog.

Variable Frequency drives
& Accessories

Construction options

MOTORS

- With PTC sensor
- Heavy duty (for heavy application)
- 4 poles

VARIABLE FREQUENCY DRIVES (VFD)

- Installed on motor and wired

PUMPS

- Mechanical seals, wear parts, and elastomers are available in EPDM or FKM. They can be combined with SiC/graphite, SiC/SiC, or WC/WC wear parts.
- Balanced mechanical seal: the design reduces the liquid load on wear parts, thereby extending the product's lifespan.
- Optional upper thrust bearings are available for motors up to 4 kW. They protect the motor bearing from the pump's upper thrust and in case the motors do not meet the minimum requirements. The installation of the upper thrust bearing is reversible (it is always possible to switch back to the standard version or to install it).
- High-pressure pumps are reinforced design pumps with a maximum working pressure of 50 bar (only available with Victaulic connections).
- Passivated pumps are ideal for pumping corrosive liquids, such as those used in reverse osmosis systems. These pumps are available in AISI 316/CF-8M. They have a chemical treatment and special design features that provide higher corrosion resistance.
